

T-2909-F Fuel Line / Steel as original/ Vaporizer Carb / 26-27

This fuel line is for cars and trucks with cowl gas tanks and any factory model T vaporizer type carburetor. To make it easier and more economical to ship, this fuel line has not been bent to its final correct shape. The steel tubing can easily be bent by you to the correct shape without any tools.

STEP 1:

Uncoil the tubing on a flat surface and following the bending instructions below, bend it into a straight line. The correct overall straight length is 17 1/2" .

STEP 2:

Following the dimensions in the sketch below, hand bend the tubing to match the sketch. Your bends do not have to exactly match those shown. All Model T's are not exactly the same and slight variations will not matter.

BENDING INSTRUCTIONS:

This tubing is manufactured to be easily hand bent. It will not kink or break if the bends are not sharp. Bend slowly and do not use tools. Work in your bend from one direction. Do not try to do it in one movement.

WARNING! REPEATED EXCESSIVE SHARP BENDING AT THE SAME SPOT MAY CAUSE THE TUBING TO FAIL!
