

T-5149 Battery Spacer Board

The Battery Board comes unfinished, so you can finish it as you desire. Simply insert the Battery Board into the battery holder. The unique notches on the Battery Board will hold the board in place so no mounting hardware is needed. Next, place the battery on top of the Battery Board and install the battery hold down clamps. When installing the hold down clamps, mount the hold down clamps inverted so that when they are tightened down the battery is secured and immovable. Lastly, connect the battery terminals to the battery post.
